1. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach the invention as claimed in independent claims 1, 12, and 19, requiring in the combination the specified data and its algorithmic processing steps, where the mathematical relationships between plural physical parameters governing elastic wave propagation in the subsurface reservoir to the porosity and saturation in the subsurface reservoir are determined and they used to derive a forward model of the seismic attributes to derive a plurality of conditional probability density functions for the seismic attributes, then applying a Bayesian inversion to the conditional probability density functions to derive a joint probability density function for the porosity and saturation parameters, and then integrating this joint probability density function to derive a probability density function for the porosity and a probability density function for the saturation representing these real world physical properties of the real world subsurface reservoir.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donald McElheny, Jr. whose telephone number is 571-272-2218. The examiner can normally be reached on Monday-Thursday from 7:30 to 4:00.
